LegalEase – AI Powered Legal Document Generator

SkillWallet Phase-wise Project Report

Phase 1 – Problem Identification

Many users face difficulties while creating legal documents because the process is time-consuming, involves complex legal language, and often results in formatting errors. There is a need for an AI-based legal document generation platform.

Phase 2 – Requirement Analysis

Functional Requirements: Login, Document Selection, AI Generation, Editing, Export.
Non-Functional Requirements: Security, Reliability, User-Friendly Interface, Fast Response.

Phase 3 – Project Design

Workflow: Select Document Type → Enter Details → AI Processing → Generate Draft → Review & Edit → Export.

Phase 4 – System Architecture

Layers: User Interface, Application Layer, AI/NLP Layer, Data Layer.

Phase 5 – Technology Stack

Frontend: HTML/CSS/JS/React. Backend: Flask/FastAPI/Node.js. Database: MySQL/PostgreSQL/MongoDB. AI: LLM APIs.

Phase 6 – Feature Development

Document Templates, AI Generation, Smart Forms, Review & Edit, Export, Simple Interface.

Phase 7 – Testing & Security

Validation Testing, Security Controls, Authentication, Privacy Protection and Human Review.

Phase 8 – Results & Future Enhancements

Benefits include faster preparation, reduced manual work and digital document management. Future enhancements include multilingual support, e-signatures and analytics.

Conclusion

LegalEase simplifies legal document preparation using AI-assisted generation and structured templates.
